**U.S. Embassy**

Prepared by:

Lindy Crothers

---

#### **Report Highlights:**

**Australia is a prosperous, politically & economically stable, industrialized nation. The per capita GDP is approximately US\$19,400, comparable to industrialized western countries. Australia's consumer oriented agricultural imports average about \$1.7 billion annually, of which the US supplies about 10-12 percent. Two companies dominate the Australian grocery sales picture - Woolworths & Coles - with a combined share of 66 percent of the market.**

## **Section I: Market Overview**

Americans and Australians have a warm relationship that spans the history of both nations. Australia and the United States share a common heritage, culture and language and have supported each other in every major international crisis of this century. Yet, despite friendship and close ties, most Americans don't know much about Australia. American television romanticizes Australia's vast continental landmass and unique wildlife, and its frontier/surfer/barbecue/sporting stereotypes. But few Americans know the real, contemporary Australia.

Australia is a prosperous, politically and economically stable, industrialized nation. It enjoys an enormous natural resource base of agriculture and minerals; a highly developed human resource base; modern legal and financial systems; a physical and service infrastructure to support complex business and industry. Its state-of-the-art transportation and telecommunications systems (both internal and international) support a well developed, economically diversified market with demand across the many sectors of a modern, industrialized, export-oriented, affluent consumer society. The per capita GDP is approximately US\$19,400, comparable to industrialized western countries. The economy is growing steadily, inflation and interest rates are low and investment terms are competitive. The major concerns are a relatively high unemployment rate and a large external account deficit.

Australia is one of the most urbanized societies in the industrialized world, even though its land mass is the size of the continental United States. Of its 19.7 million people, more than 85 percent live along the east and southeast coast in the large urban areas of Sydney, Melbourne, Adelaide and Brisbane (Perth is on the west coast) and in smaller cities and towns within 100 miles of the ocean. While the center of the continent is flat, dry, and mineral rich, the coastal areas are wet, mountainous, and densely forested. The interior plains are rich and fertile, supporting great varieties of agriculture.

The society is increasingly multi-cultural, with the traditional Anglo-Celtic majority now joined by immigrants from Southern and Eastern Europe, the Middle East, Latin America and Asia who are making their cultural influence felt more vibrantly.

The Australian economy is enjoying a period of solid growth with low inflation. For the 2001 calendar year, real gross domestic product grew 2.7 percent. It is anticipated that growth will be around 3.75 percent in 2002/03, but current drought conditions could reduce this by 0.5-0.8 percentage points.

The consumer price index rose by 3.1 percent in 2001, after the effects of the Goods and Services Tax (GST) washed through. The inflation rate has returned to its 2-3 percent Reserve Bank of Australia target level, as the initial effects of the introduction of the GST diminish.

Advantages	Challenges
U.S. culture well accepted and similar to Australia	Strict quarantine regulations with regard to fresh produce, meat and dairy products
No language barriers to overcome	U.S. dollar has appreciated relative to the Australian dollar adding to the cost of U.S. products
U.S. products have excellent image and acceptance.	

## Section II: Exporter Business Tips

- Agents/distributors are key components in developing exports of U.S. consumer-ready foods to Australia.
- Australia is a sophisticated market which is interested in new-to-market food products.
- Increasingly multicultural society creates opportunities for ethnic food products.
- After sales services, such as cooperative advertising, are an important aspect of successfully entering this market.
- Companies with innovative packaging have an advantage.
- Most of the major Australian importers visit the United States at least once a year to see what is available and to place orders if the items are appealing.
- The Food Standards Code is developed and updated by Food Standards Australia New Zealand Food (FSANZ) - formerly ANZFA. The Code was recently completely reviewed and consolidated into a joint code which applies to both Australia and New Zealand and which comes into final effect in December 2002 (it has been in a transitional phase for the past two years). More information is available on the FSANZ web site at the following address:  
<http://www.foodstandards.gov.au>.
- The Food and Agriculture Import Regulations and Standards (FAIRS) report for Australia contains detailed information on Australia's food standards, labeling requirements, import regulations, etc. This report can be viewed/downloaded at the following Internet site:  
<http://www.fas.usda.gov/scriptsw/attacherep/default.htm>
- In December 2001, mandatory labeling requirements for genetically modified (GM) foods, where introduced DNA or protein is present in the final food, came into effect in Australia. The requirements are covered in [Standard 1.5.2](#) of the joint Australia New Zealand Food Standards Code and a 'Users Guide' has been developed to help interpret the requirements. This information is available on the Internet by clicking on the above links or at the FSANZ web site listed above.
- Australian Maximum Residue Limits are in the schedules of [Standard 1-4-2](#) of the Joint Australia New Zealand Food Standards Code. MRLs are constantly changing and guidance on the latest available information is available from this office at the following e-mail address:  
[AgCanberra@fas.usda.gov](mailto:AgCanberra@fas.usda.gov).
- Food safety import regulations can be found at the Australian Quarantine Inspection Service

(AQIS) Internet site at: [www.aqis.gov.au](http://www.aqis.gov.au)

## Trade Shows

At this time, there is only one major food show in Australia, Fine Food Australia, which is held each year alternating between the cities of Sydney and Melbourne. The show also includes the Supermarket & Hotel industry show. This show is attended by major buyers and importers from all over the country and region. Due to Australia's large physical size and the high cost of internal airfares and transport, it is felt that Fine Food is the most cost-effective opportunity for U.S. companies to introduce consumer-oriented product to the Australian market.

Fine Food is an international exhibition for the food, drink, and equipment industries and is the largest food industry event in the region. It enjoys the support of major industry organizations and is the only event that allows companies to reach the retail, food service and hospitality industries at once. As well as exhibitors from Australia, regular exhibitors include groups from Asia, Europe and the Americas.

Admission to Fine Food and the Supermarket and Hotel shows is "trade only" and is restricted to persons in the food, drink, equipment, hotel and supermarket trades.

### Section III: Market Structure & Trends

- Australia has well educated, affluent consumers, willing to try new products. Consumer-ready foods continue to dominate the import market for foodstuffs.
- Most tariffs on imported foods are low.
- Very strict sanitary and phytosanitary standards are an impediment to the import of many fresh products.
- Australia has strict food standards and labeling requirements which are set out in the [joint Australia New Zealand Food Standards Code](#). If U.S. products can meet these standards, they can have a good market in Australia.
- While Australia is a major producer/exporter of both tropical and temperate zone agricultural products, it is also an importer of further processed and consumer ready products.
- Value added products and innovative packaging are valuable selling points in the Australian market.
- Some of the U.S. success in this market has been the complementarity of the Northern/Southern Hemisphere growing seasons. However, success is very much tied to good consumer promotion efforts.
- U.S. products are well regarded as value for money in this market.
- It is estimated that over 85 percent of the products on Australian supermarket shelves are either imported or produced locally by foreign owned companies.
- The United Kingdom and other EU countries are important competitors in the value added import market in Australia. Strong historic ties and foods which match the tastes of the majority of the population are helpful in maintaining this position.
- With the Australian population becoming more multi-cultural, imports from other countries such as Greece, Italy and Spain, as well as Southeast Asian countries are increasing.
- The Treaty of Closer Economic Cooperation with New Zealand has also made that country a strong player in the imported food market.
- The high degree of urbanization, the high ratio of females in the workforce and the relative prosperity of Australia, has made food consumption a very competitive field. There has been a move among Australian food manufacturers to consolidate. This has led to greater competition by brands for shelf space in supermarkets.
- The use of microwaves is firmly established in Australia - 92 percent of households have a microwave. This, plus the large number of women in the workforce, has led to an increase in more oven or microwave ready meals.
- Fast foods and "take-away" foods are also very popular.
- The restaurant sector has also benefitted from this demographic trend, and away-from-home consumption is growing rapidly.
- Australians are active international travelers and become exposed to new cuisines when traveling.
- Two companies now dominate the Australian grocery sales picture - Woolworths and Coles.

- Both Woolworths and Coles are national in scope and are also organized along state lines and have recently been involved in a campaign to acquire smaller independent chains to maintain their market shares. In recent years these giants of the Australian food retail business have increasingly become their own importers and bypassed the more traditional importer.
  - S Woolworths has a 38.3 percent share of the grocery market and has 661 stores concentrated in the states of New South Wales, Victoria and Queensland.
  - S Coles has a 28.1 percent national share and 630 stores concentrated in the same three states.
  - S Metcash, a supplier/distributor to independent chains controls 12 percent of the packaged grocery market.
- All these supermarket chains have central warehouses for each state of operation and have sub-warehouses depending on the concentration of stores in an area.
- The domestic food processing sector in Australia is large and more sophisticated than the population base of 19 million would indicate.
- Many Australian companies export processed products to Southeast Asia. This is a trend that will continue to expand in the near term.
- Several multinational companies use manufacturing/processing facilities in Australia as a spearhead in penetrating the Southeast Asian market. This trend will also accelerate. The acquisition of Edgell/Birdseye by Simplot is an example of this trend.

#### Section IV: Best High-Value Product Prospects

- **Pasta Sauces** - the pasta sauce market is one of the fastest growing product categories in the supermarket. Grocery value of the pasta sauce market is USD 108 million, a growth of 24% between 2000 and 2001. Growth in the pasta sauce market was driven by the expansion of the "stir through" segment which grew by 39%.
- **Fresh and ready to serve soups** continue to grow in popularity as consumers demand a low fat alternative, with a home-made taste that is easy to prepare. The ready to serve segment grew 16% in the past year.
- **Asian noodles** in particular have become popular with shelf-stable cooking noodles growing 24%. The diversity of **noodle sauces** is attributed to this growth - the strong flavored sauces being used not only for noodles dishes, but stir-frys and marinades.
- **Confectionery** - in 2001, the market recorded strong growth – in excess of 6%, both in volume and value. This growth was reflected across all categories.
- **Canned Fish** - Valued at USD 192 million in 2001, the canned fish segment is the largest and most active and innovative of the canned food market in Australia and grew by nine percent over the previous year. Tuna is driving the growth with some strong growth in variants such as springwater (31 percent) and flavored (25 percent). These two sub-segments represent about half of total tuna dollar sales.

- **Hot Beverages** - Tea is the best performing segment in the hot beverage category. Herbal infusions have become more mainstream thanks to the leading tea brands such as Lipton and Twining introducing herbal infusions. This has meant that herbal-type teas are now also selling in supermarkets rather than just health food shops. Estimates of the total size of the herbal market is USD 18.9, million with an estimated growth of 4.4 percent in 2001.
- **Nutritious Snacks** - with a grocery value of USD 176 million, the market for nutritious snacks is growing at a rate of nine percent. Health and convenience is a good combination and the nutritional snack category is currently one of the fastest growing categories in Australian supermarkets.
- **Energy drinks** - This category grew by 187 percent in 2001, due to the introduction of a number of new products and high levels of advertising.
- **Frozen meals** - The increasing popularity of home meal replacement is having a direct impact on the growth of frozen ready meals. The sale of frozen ready meals in Australia grew by 26.3 percent in 2001. New varieties and the recent shift towards nutritional value have prompted consumers to perceive frozen meals as healthier than take-away foods. Reflecting the fact that healthy is a priority for many consumers, sales in the 'healthy' sub-segment rose by 49 percent.
